Prices available upon request

The TrussDolly comes standard with a 4WayLeveler. It can also be equipped with a 100 or a 150mm bowl adapter. We carry two models in our delivery program, a They 60cm and a 80cm version. The higher the speed ratings the longer the TrussDolly should be. The trackingwheels of the TrussDolly are specially selected on their hardness and perfect shape, equiped with low-speed precision bearings.

Customers who mainly use our system for overhead tracking shots are recommended to purchase a TrussDolly60.

Clients who are in need of more versatility by combining the TwinDolly and TrussDolly are recommended to purchase the TwinRoundBracket, which will turn your TwinDolly into a TrussDolly.
