TwinDolly / TwinTube

The TwinDolly is a blended dolly/slider combination in an effective, solid design. Together with TwinTube it is comparative with the old school camrail. It has the same elements as a slider but it is definitely more versatile. It is a simple small dolly and track system for more heavy cameras like Arricam or a fully equipped Red or Alexa/Amira/SonyF65.

High durability and robustness joined in a compact unit, just over 5kg and about 40 cm in lengths and width.

Various options, such as the TwinSliderBase, and dedicated flight cases make this product to a flexible, easy to set up and easy to carry piece of equipment.
